Oracle dump files stores table structure in an undecoded format. Oracle dump files are binary files that do not contain any human readable data. They are used for backup purposes. This setup script will convert Oracle dump files into an Excel spreadsheet. Key features: * Simple wizard-based approach for an easy conversion. * Supports all Oracle dump files and many databases. * Works for any Oracle dump file version including encrypted dump file and EXP. * Supports Microsoft Excel 2003 and 2007 format for output * Works perfectly with the "Wizard" profile method for users who already have a previous setup. * Generates the file and creates the profile. * Displays all the columns and rows of the Oracle dump file in a table. * Creates an Excel.xls or.xlsx file. * Generates the formatted cells with formulas. Comments and Discussions Hi, I just wanted to tell you that I really like this software. I just made a copy of an Oracle dump file of a PostgreSQL database. I just wanted to do it to take it a little while offline as my company PC is a little slow when it comes to uploading big files to the server (I am a graduate student, my old PC isn't exactly fast). Anyway, I was pleasantly surprised when the uploaded a 20mb or so data set with data in it to the server in only 30 seconds. With a bunch of data and a pretty large table, I was able to get it done within about 30 minutes. I had heard of a tool like this, but was very surprised when I found it on the web. It is a great tool, and I'll be recommending it to everyone I know that has to deal with large data sets. I would definitely like to know how to convert to a more User friendly format (eg. SQL, PhpMyAdmin, Oracle SQL Developer etc.). Also, how to convert to another Oracle Database. For any conversion tool for Oracle which can convert from SQL files to Excel, I would be very greatful, I'm sure there is nothing like it in the market, thanks! Please if you're able to please reply with the tools you have on your knowledge. Thanks in advance! P.S. MySQLDump is another one I know which dumps databases into an SQL file. I have written a few script for myself in the past. But they are written in a method of coding I don't

One such challenge is learning not to "think like an actor". There are many reasons for this: not only do most acting teachers and directors emphasize the process of physically performing emotions; but, even in writing an original script or play, it's not unusual for actors' thoughts to intrude into their work. Kishore Hari is a best-selling author, award-winning broadcaster and yoga teacher. He has learnt this the hard way. In this interview he explains why "thinking like an actor" is a trap, and how it may be overcome. When he applied for the part of the boy in the fantasy drama series "All Creatures Great and Small", he met the casting director who told him that "you can't think like an actor. You'll never get the job." (This experience was also shared by the brilliant young actor and writer Clare Alexander in her book "Just the 10%".) He said no,

The additional parts are simply extra tools that you have bought to compliment your system. For example, why would you need a 100W and 200W power supply? Well, you would need a system where you need 200W and up, so a 100W and 200W power supply would do the job. The question I always ask people about an additional part is what do you do if the tool that came with it malfunctions. The typical answer is to just replace it with a new one. I could not disagree more. It is not the tools fault. Sometimes when a tool malfunctions, you have to make sure you are using the proper installation instructions and test
